      9
                                                    Kita juga dapat mencari detail dari sebuah film dengan menggunakan parameter i.
                                           hasilnya akan didapatkan data detail dari sebuh film berdasarkan imdbID. Misal kita
                                           mencari film dengan ID tt0418279. Maka akan ditampilkan informasi detail dari film
                                         tersebut. Selanjutnya kita bisa memasukkan JSON kedalam aplikasi codeigniter untuk
                                                                                                                                          membuat tampilan aplikasi yang lebih menarik
                                                            Query Params
                                                            Pretty Raw Preview Visualize JSON *
NO
                                       Praktikum – Bagian 2: Membuat Aplikasi Movie List Code Igniter Menggunakan
                                                                                                                                                                                                                                 Public API
                                                                             Duplikasi Project Code-Ketiga dan berilah nama project Code-ketujuh
      2
                                     Lakukan perubahan konfigurasi $config['base_url'] = 'http://localhost/rest-api/Code-
                                                                                                                                                                                          ketujuh/'; pada config.php
                                                                                                           $config['base_url'] = 'http://localhost/rest-api/ci-app7/';
      3
                                                    Buatlah sebuah file index.php pada folder view/movie/ dan tuliskan script seperti
                                                                                                                                                                                                           gambar dibawah ini:
```

```
application > controllers > 🦬 Movie.php > 😭 Movie > 😭 index
                       defined('BASEPATH') or exit('No direct script access allowed');
                       class Movie extends CI_Controller
                            public function index(){
                                $this->load->view('template/header');
                                $this->load->view('movie/index');
                                $this->load->view('template/footer');
5
       Selanjutnya buat file javascript script.js pada folder assets/js/ kemudian tuliskan script
                                       seperti gambar dibawah ini:

✓ assets

                                          > css
                                          JS bootstrap.js
                                          JS bootstrap.min.js
                                          JS jquery-3.4.1.js
                                          JS jquery.dataTables.min.js U
                                          JS jquery.min.js
                                          JS script.js
```

```
js > JS script.js > 😚 on('click', '#btn-details') callback > 😚 success
$('#search-text').on('keyup', function (e) {
    if (e.keyCode == 13) {
        searchMovies();
$('#btn-search').on('click', function (e) {
    searchMovies();
$('#movie-list').on('click', '#btn-details', function (e) {
    $.ajax({
        url: 'http://www.omdbapi.com',
        type: 'GET',
        dataType: 'json',
        data: {
            'apikey': '6d5f2390', //API Key
            'i': $(this).data('id') //Parameter i untuk pencarian film berdasarkan id film
        success: function (result) {
            if (result.Response === "True") {
               $('.modal-body').html('');
               $('.modal-body').append(
                   <div class="container-fluid">
                       <div class="row">
                               <img src="" + result.Poster + " class="img-fluid">
                           <div class="col-md-8">
                               <h4>` + result.Title + `</h4</pre>
                                Released : ` + result.Releas
                                class="list-group-item">Genre : ` + result.Genre +
                                class="list-group-item">Writer : ` + result.Writer
                                class="list-group-item">Actors : ` + result.Actors +
                                Production : ` + result.Prod
                                class="list-group-item">Plot : ` + result.Plot +
                `);
 function searchMovies() {
    $.ajax({
        url: 'http://www.omdbapi.com',
        type: 'GET',
        dataType: 'json',
        data: {
            'apikey': '6d5f2390', //API Key
            's': $('#search-text').val() //Parameter s pencarian film berdasarkan judul
        },
        success: function (result) {
           let movies = result.Search;
            $('#movie-list').html('');
            if (result.Response == "True") {
               $.each(movies, function (i, data) {
```

```
Tambahkan script pada footer.php pada folder template seperti gambar dibawah ini:
6
          <!-- jQuery first, then Popper.js, then Bootstrap JS -->
          <script src="https://code.jquery.com/jquery-3.2.1.min.js"></script>
          <script src="https://cdnjs.cloudflare.com/ajax/libs/popper.js/1.14.3/umd/popper.min.js">
          <script src="<?= base_url(); ?>assets/js/bootstrap.js"></script>
          <script src="<?= base_url(); ?>assets/js/script.js"></script>
          <script src="https://stackpath.bootstrapcdn.com/bootstrap/4.4.1/js/bootstrap.min.js" integ</pre>
          /html
7
      Tambahkan juga script pada header.php pada folder template seperti gambar dibawah
                                                  ini:
           <!doctype html>
           <html lang="en">
             <meta charset="utf-8">
             <meta name="viewport" content="width=device-width, initial-scale=1, shrink-to-fit=no">
             <!-- Bootstrap CSS -->
      10
             <link rel="stylesheet" href="<?= base_url(); ?>assets/css/bootstrap.css">
             <link rel="stylesheet" href="https://stackpath.bootstrapcdn.com/bootstrap/4.4.1/css/boo</pre>
             <link rel="stylesheet" href="https://cdnjs.cloudflare.com/ajax/libs/font-awesome/4.7.0/</pre>
               .badge {
                 margin-left: 3px;
      19
            <title>Movie Search</title>
             <nav class="navbar navbar-expand-lg navbar-light bg-light">
      24
              <div class="container">
                 <a class="navbar-brand" href="#">CI</a>
                 <button class="navbar-toggler" type="button" data-toggle="collapse" data-target="#n</pre>
                   <span class="navbar-toggler-icon"></span>
                 <div class="collapse navbar-collapse" id="navbarNav">
                   class="nav-item active">
                      <a class="nav-link" href="<?= base_url(); ?>">Home <span class="sr-only">(cur
                     class="nav-item">
