Uraian Jawaban
No
                                             Praktikum bagian 1
 1
                       defined('BASEPATH') OR exit('No direct script access allowed');
                       class mahasiswa extends CI_Controller {
                           public function index()
                               $this->load->database();
                               $data['title']='List Mahasiswa';
                               $this->load->view('template/header' ,$data);
                               $this->load->view('mahasiswa/index');
                               $this->load->view('template/footer');
                       /* End of file Controllername.php */
                 Menambahkan load database yang dilakukan oleh function index saja
2
                  config.php
                                M Home.php
                                               mahasiswa.php X index.php ...\mahasiswa
                  application > controllers > 🤲 mahasiswa.php > ...
                        ?php
                            defined('BASEPATH') OR exit('No direct script access allowed');
                            class mahasiswa extends CI_Controller {
                               public function __contruct()
                                   parent::__construct();
                                   $this->load->database();
                               public function index()
                                   $data['title']='List Mahasiswa';
                                   $this->load->view('template/header' ,$data);
                                   $this->load->view('mahasiswa/index');
                                   $this->load->view('template/footer');
                            /* End of file Controllername.php */
                     Ini digunakan untuk database dapat digunakan banyak function
```

```
$autoload['packages'] = array();
                                   Auto-load Libraries
                                 These are the classes located in system/librarie
                                    $autoload['libraries'] = array('user_agent' =>
                                $autoload['libraries'] = array(('database'));
                               Ini adalah proses load database seperti diatas
                          ?php
4
                             defined('BASEPATH') OR exit('No direct script access allowed');
                             class mahasiswa extends CI_Controller {
                                public function index()
                                    $data['title']='List Mahasiswa';
                                    $this->load->view('template/header' ,$data);
```

Membuat comment pada function construct, karena di asumsikan bahwa semua controller membutuhkan database

\$this->load->view('mahasiswa/index');
\$this->load->view('template/footer');

Menambahkan function getAll mahasiswa pada mahasiswa_model.php

Selain menggunakan query builder. Query juga bisa seperti gambar di atas ini

Setelah mempunyai model dengan nama mahasiswa_model langkah selanjutnya adalah akan load model ini ke dalam controller mahasiswa

10

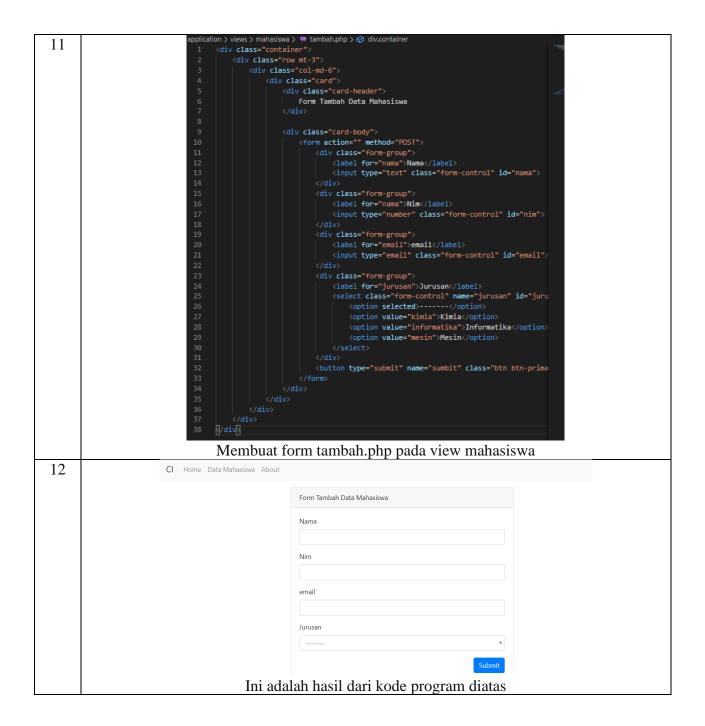

Ini adalah penambahan var_dump

```
> � body > � nav.navbar.navbar-expand-lg.navbar-light.bg-light > � div#navbarNav.collapse.navbar-collapseset="ut+-6">

                                                                                          <a class="nav-link" href="#">About</a>
                                                                                        class="nav-link disabled" href="#">Disabled</a>
                                                                            Agar header dapat di klik menambahkan kode program di atas
                                                                                                                     $autoload['helper'] = array('url');
                                                                            Lalu menambahkan kode program tersebut ke dalam autoload
8
                                                         ← → C (i) localhost/ci-app2/mahasiswa
                                                          CI Home Data Mahasiswa About
                                                                                                                                                              Daftar Mahasiswa
                                                                                                                                                                    dina
                                                                                                                                                                   soni
                                                                                                                       Ini adalah hasil dari kode program diatas
```

```
application > views > mahasiswa > 🧌 index.php > 😝 div.container
9
                        <div class="container">
                             <div class="row mt-4">
                                 <div class="col-md-6">
                                    <a href="<?= base_url(); ?>mahasiswa/tambah" class="btn btn-primary"
                             <div class="row mt-3">
                                 <div class="col-md-6">
                                     <h2>Daftar Mahasiswa</h2>
                                     <?php foreach ($mahasiswa as $mhs) : ?>
                                              <?= $mhs['nama']; ?>
                                          <?php endforeach ?>
                        /div
                         Membuat form input dengan menambahkan pada di index.php
10
                              defined('BASEPATH') or exit('No direct script access allowed');
                              class mahasiswa extends CI_Controller
                                  public function __contruct()
                                      parent::__construct();
                                      $this->load->model('mahasiswa_model');
                                  public function index()
                                      $data['title'] = 'List Mahasiswa';
                                      $data['mahasiswa'] = $this->mahasiswa_model->getAllmahasiswa();
                                      $this->load->view('template/header', $data);
$this->load->view('mahasiswa/index', $data);
                                      $this->load->view('template/footer');
                                  public function tambah()
                                      $data['title'] = 'Form Menambahkan Data Mahasiswa';
                                      $this->load->view('template/header', $data);
$this->load->view('mahasiswa/tambah', $data);
                                      $this->load->view('template/footer');
```

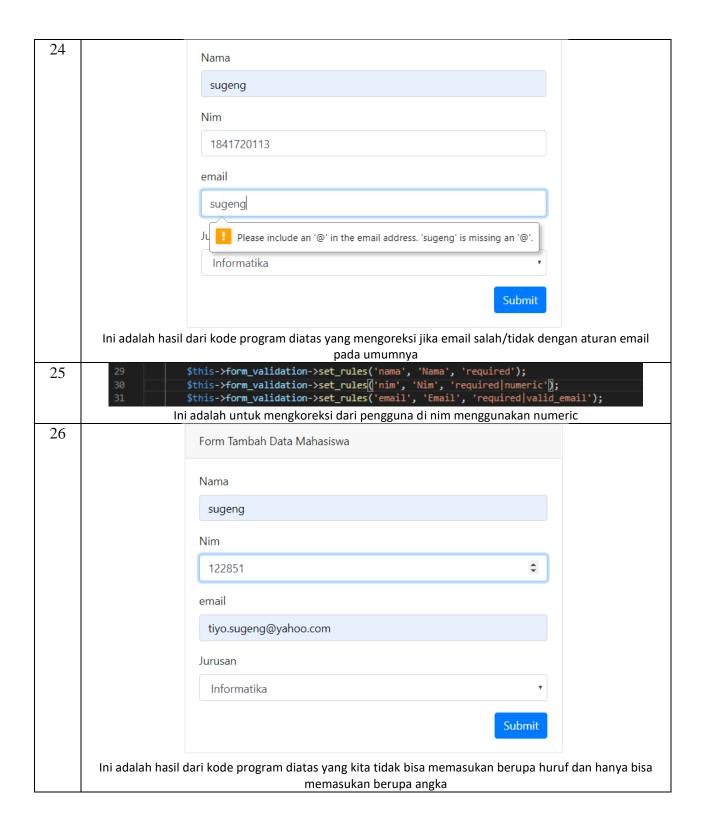

Menambahkan function tambah pada controller mahasiswa

```
13
                        application > views > mahasiswa > 🦬 index.php > 🤣 div.container
                               iv class="container"
                                 <div class="row mt-4">
                                     <div class="col-md-6">
                                         <a href="<?= base_url(); ?>mahasiswa/tambah" class="btn btn-primary">Tamb

                                          <label for="jurusan">Jurusan</label>
<select class="form-control" name="jurusan" id="jurusan" name="jurusan">
                                              <option selected>-----</option>
                                              option value="kimia" Kimia</option>
                                              <option value="informatika">Informatika</option>
<option value="mesin">Mesin</option>
                                      <button type="submit" name="sumbit" class="btn btn-primary float-right">Submit
                                             Menambahkan atribut name pada tambah.php
```

```
16
                              public function tambah()
                                  $data['title'] = 'Form Menambahkan Data Mahasiswa';
                                  $this->load->library('form_validation');
                                  $this->form_validation->set_rules('nama', 'Nama', 'required');
                                  if ($this->form_validation->run() == FALSE) {
                                     $this->load->view('template/header', $data);
                                     $this->load->view('mahasiswa/tambah', $data);
                                     $this->load->view('template/footer');
                                  } else {
                                     echo "data berhasil ditambah";
                          Menambahkan rule pada mahasiswa.php di dalam function tambah
17
                                     <div class="card-body">
                                          <?= validation_errors() ?>
                                          <form action="" method="post">
                                     Menambahkan pesan error pada tambah.php
18
                       CI Home Data Mahasiswa About
                                                 Form Tambah Data Mahasiswa
                                                 The Nama field is required.
                                                 Nim
                                                 email
                                                 Jurusan
                    Maka hasil dari kode program membuat required akan seperti di gambar atas ini
19
                                  <div class="card-body">
                                      <?php if (validation_errors()) : ?>
                                           <div class="alert alert-danger" role="alert">
                                              <?= validation_errors(); ?>
                                          /div
                                      <?php endif ?>
             Menampilkan pesan error yang lebih menarik, tambahkan code validation error seperti diatas
```

```
27
                                                         $data['title'] = 'Form Menambahkan Data Mahasiswa';
                                                         $this->load->library('form_validation');
                                                         $this->form_validation->set_rules('nama', 'Nama', 'required');
$this->form_validation->set_rules('nim', 'Nim', 'required|numeric');
$this->form_validation->set_rules('email', 'Email', 'required|valid_email')
if ($this->form_validation->run() == FALSE) {
                                                              $this->load->view('template/header', $data);
$this->load->view('mahasiswa/tambah', $data);
$this->load->view('template/footer');
                                                         } else { | // echo "data berhasil ditambah";
                                                              $this->load->model('mahasiswa_model');
$this->mahasiswa_model->tambahdatamhs();
                                                              redirect('mahasiswa', 'refresh');
                                 Tambahkan kode program diatas untuk menambahkan data ke dalam database
28
                                            application > models > * mahasiswa_model.php > ...
                                                     defined('BASEPATH') or exit('No direct script access allowed');
                                                     class mahasiswa_model extends CI_Model
                                                          public function getAllmahasiswa()
                                                                $query = $this->db->get('mahasiswa');
                                                               return $query->result_array();
                                                               return $this->db->get('mahasiswa')->result_array();
                                                          public function tambahdatamhs()
                                                                $data = [
                                                                     "nama" => $this->input->post('nama', true),
"nim" => $this->input->post('nim', true),
                                                                     "email" => $this->input->post('email', true),
                                                                      "jurusan" => $this->input->post('jurusan', true),
                                                                $this->db->insert('mahasiswa', $data);
```

Menambahkan kode program tersebut untuk melanjutkan data ke database
